

Performance Task

Security KPIs

Objective:

At the end of the exercise, the students should be able to:

- Formulate a strategic service vision based on ITSM processes.

Requirement:

- Microsoft Word

Instructions: Identify the KPIs in the case study and create a simple chart that visualizes the number of information tracked for each KPI. **(60 points)**

TeleMarketeers has been a BPO company for local chat and call support for Internet service providers for the past 10 years. And just like any big company, they have every imaginable security measure. They have a network team for networking and Internet connection matters, a firewall team for monitoring any firewall activity, an IT desktop support team for direct agent assistance, and a team they call the "Blue Team" that determines security strategies and controls to effectively combat perceived threats.

For their decade anniversary last month, TeleMarkeeters created another security group called "Fast Attack" that specifically targets malware attacks. They were used as white-hat hackers at first for testing other security groups, but they found out that malware requires specialized tools and skills that the network and firewall teams could not handle.

The Fast Attack team acquired malware-specific devices and software and assessed them on five (5) computers, which had positive results, and all worked accordingly. However, when assessed on 20 computers, delays in the effectiveness of the resolution, slower progress, and complete corruption of the files were observed.

One day, at 10 in the morning, 20 agents from different accounts raised reports on their computers. From their devices running slower than usual or freezing and frequently crashing to getting random error messages from applications they have never had issues with before, the IT department sent IT desktop support for troubleshooting since they assumed these were low-risk incidents. That is until login credentials were compromised and locked. Random keyboard strokes and suspicious browsing behavior have also been observed. This alerted the Fast Attack team.

By 1 PM, the Fast Attack team concluded that these behaviors showed signs of a spyware attack. Luckily, between their last test and today, they were able to purchase better software and configure a system that could target more than 100 computer systems. They also collaborated with the network and firewall teams to maximize protection. The team identified the affected server, and they were able to wipe the malware off in just 3 hours.

GRADING RUBRIC:

Criteria	Excellent (4)	Good (3)	Fair (2)	Poor (1)	Score
Completeness (x5)	The student provided <u>all</u> the requirements.	The student <u>missed some</u> requirements	The student <u>missed most</u> of the requirements	The output is <u>unfinished</u> .	/20
Chart (x4)	The chart is <u>cohesive and detailed</u> .	The chart is <u>clear but lacks complete details</u> .	The chart is <u>unclear and lacks complete details</u> .	The chart is <u>unorganized and has no details</u> .	/16
Correctness (x1)	<u>All</u> KPIs were correctly identified.	<u>Most</u> KPIs were correctly identified.	<u>Some</u> KPIs were correctly identified.	<u>Incorrect</u> KPIs were identified.	/4 x 6
