

02 Performance Task 2: CyberQ Exam Preparation (Modules 8 & 9)

Student: Godwyn Neri | Date: September 27, 2026

Activity Overview: Submission of 100% completed progressive assessment test results for EC-Council Cyber Quotient (Ethical Hacking Essentials v1 Exam Prep) covering Module 8 (Wireless Attacks and Countermeasures) and Module 9 (Mobile Attacks and Countermeasures).

Module	Test Topic	Status	Score
Module 08	Wireless Terminology	Passed	100%
Module 08	Wireless Encryption	Passed	100%
Module 08	Wireless Network-Specific Attacks	Passed	100%
Module 08	Bluetooth Attacks	Passed	100%
Module 08	Wireless Attack Countermeasures	Passed	100%
Module 09	Mobile Attack Anatomy	Passed	100%
Module 09	Mobile Platform Attack Vectors and Vulnerabilities	Passed	100%
Module 09	Mobile Attack Countermeasures	Passed	100%

Part 1: Module 8 — Wireless Attacks and Countermeasures

The following tests evaluate concepts in 802.11 wireless security, encryption protocols (WEP, WPA, WPA2, WPA3), attack vectors, Bluetooth vulnerabilities, and defensive countermeasures.

Topic 1: Wireless Terminology

Assessment covering wireless network standards, SSID broadcasting, transmission spectrums, and antenna fundamentals.

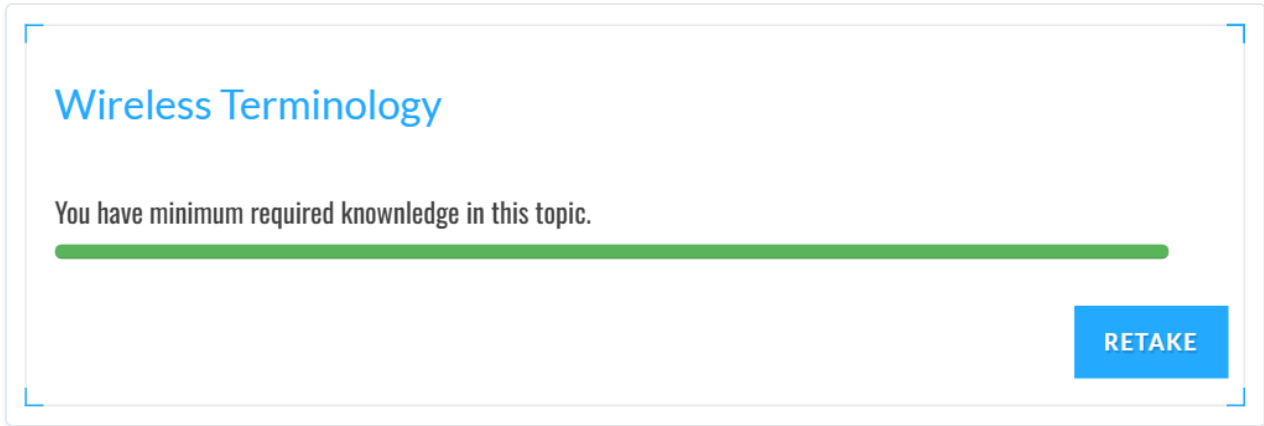

Figure 1.1: Wireless Terminology test completed with 100% score.

Topic 2: Wireless Encryption

Assessment covering RC4, TKIP, CCMP/AES, pre-shared key handshakes, and enterprise authentication protocols.

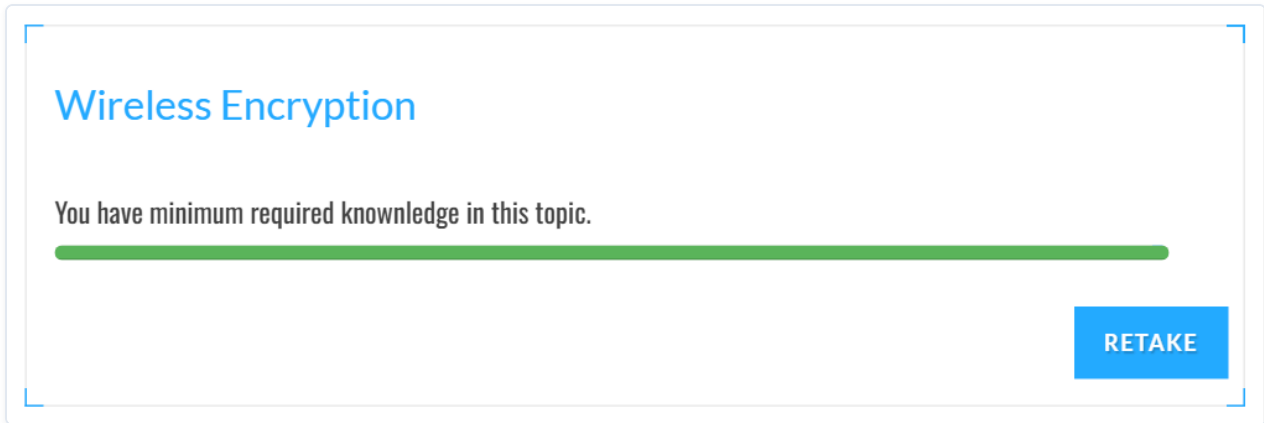

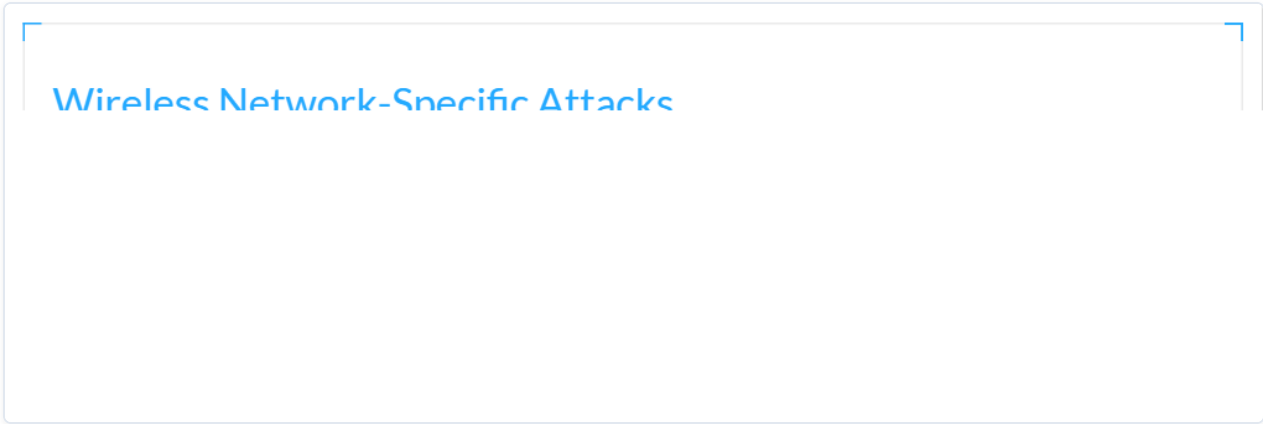

Figure 1.2: Wireless Encryption test completed with 100% score.

Topic 3: Wireless Network-Specific Attacks

Assessment covering Evil Twin, Rogue AP, Deauthentication flooding, WPA 4-way handshake cracking, and MAC spoofing.

A screenshot of a test completion screen. At the top, the title 'Wireless Network-Specific Attacks' is displayed in a blue, sans-serif font. Below the title, the rest of the screen is blank white space.

Wireless Network-Specific Attacks

Figure 1.3: Wireless Network-Specific Attacks test completed with 100% score.

Topic 4: Bluetooth Attacks

Assessment covering Bluesnarfing, Bluejacking, Bluebugging, and pairing protocol vulnerabilities.

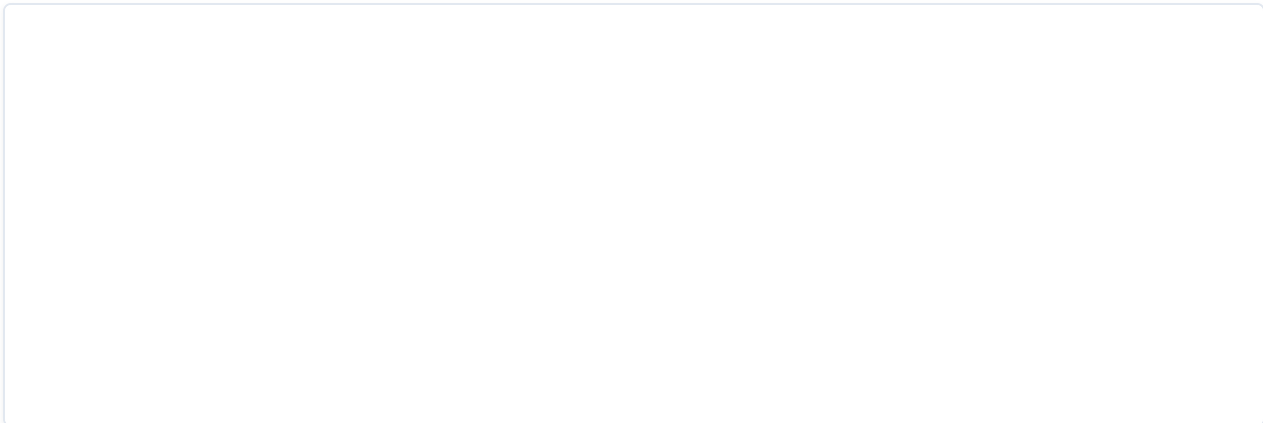

A screenshot of a test completion screen. The screen is entirely blank white space.

Figure 1.4: Bluetooth Attacks test completed with 100% score.

Topic 5: Wireless Attack Countermeasures

Assessment covering WPA3 deployment, 802.1X network access control, Wireless IDS/IPS, and rogue AP detection.

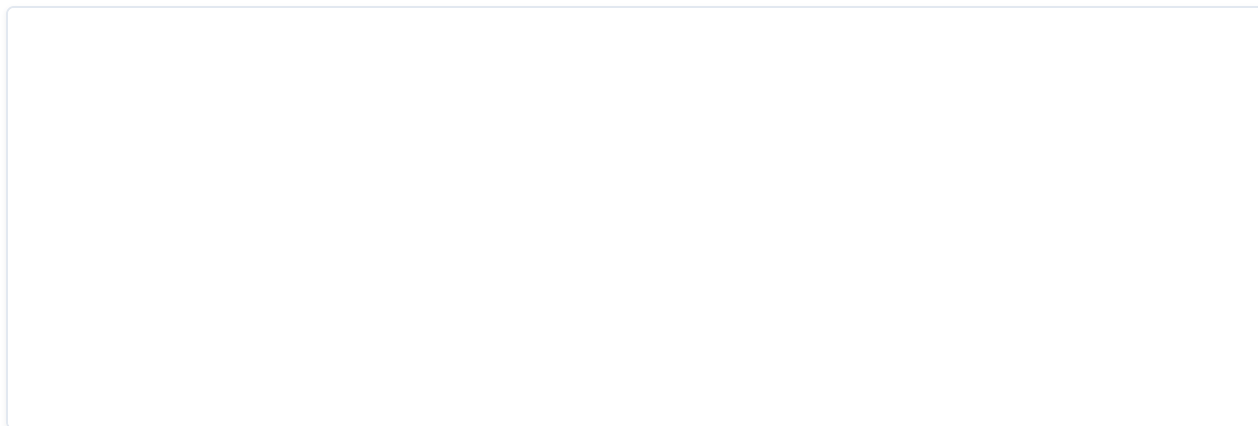

Figure 1.5: Wireless Attack Countermeasures test completed with 100% score.

Part 2: Module 9 — Mobile Attacks and Countermeasures

The following tests assess vulnerabilities in mobile platforms (Android and iOS), app sandboxing, malicious permissions, and mobile security mitigations.

Topic 1: Mobile Attack Anatomy

Assessment covering mobile attack vectors, device compromise pathways, SMS phishing (smishing), and root/jailbreak mechanisms.

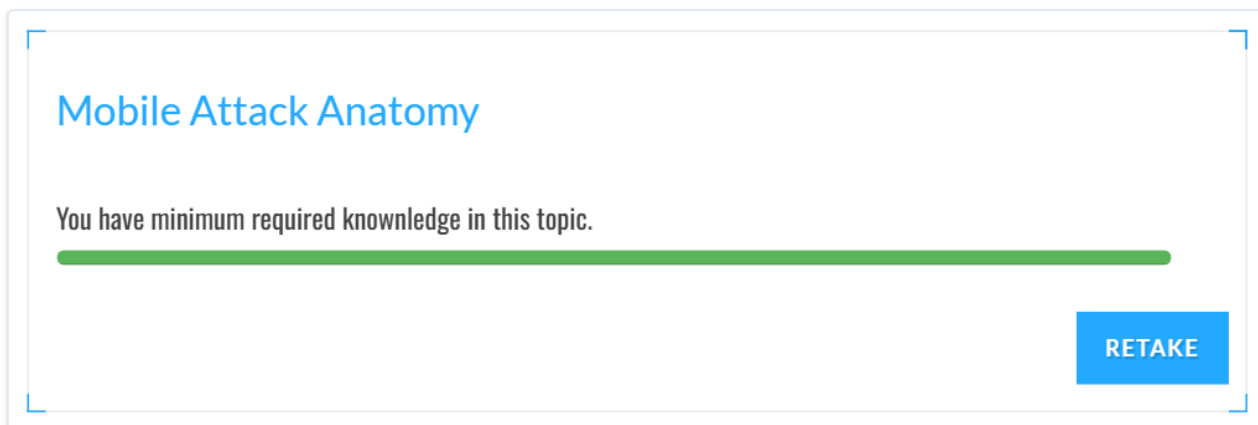

Figure 2.1: Mobile Attack Anatomy test completed with 100% score.

Topic 2: Mobile Platform Attack Vectors and Vulnerabilities

Assessment covering insecure data storage, weak server-side controls, SSL/TLS interception, and IPC abuse.

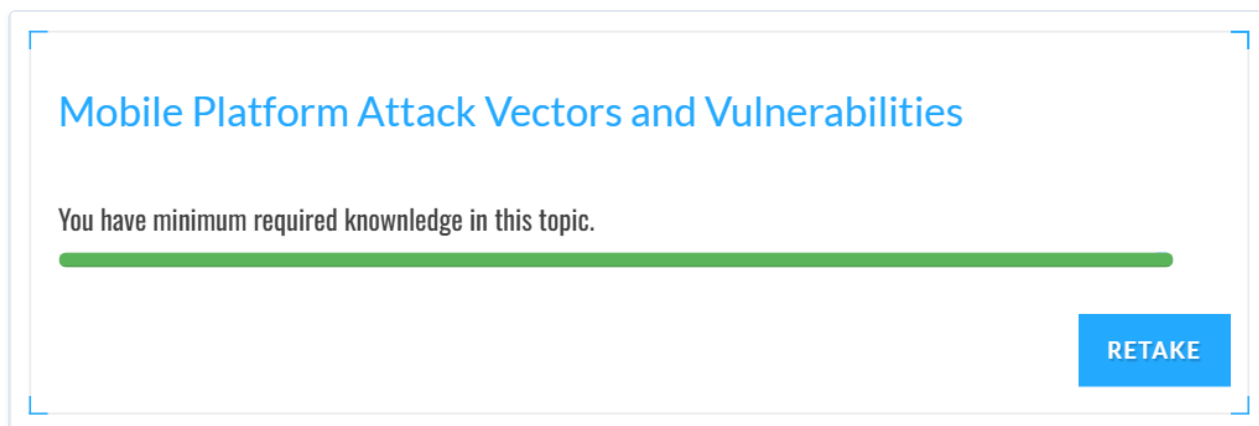

Figure 2.2: Mobile Platform Attack Vectors and Vulnerabilities test completed with 100% score.

Topic 3: Mobile Attack Countermeasures

Assessment covering mobile application vetting, certificate pinning, enterprise containerization, and endpoint management.

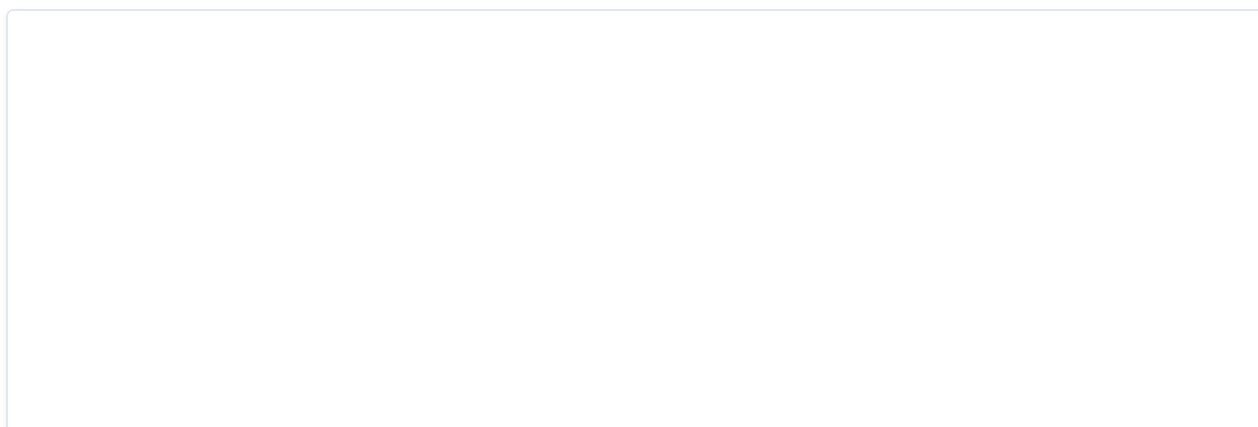

Figure 2.3: Mobile Attack Countermeasures test completed with 100% score.

Part 3: Verified Progressive Assessment Report

Official progressive report from EC-Council Cyber Quotient verifying that all Module 8 and Module 9 topics have been successfully passed under student Godwyn Neri:

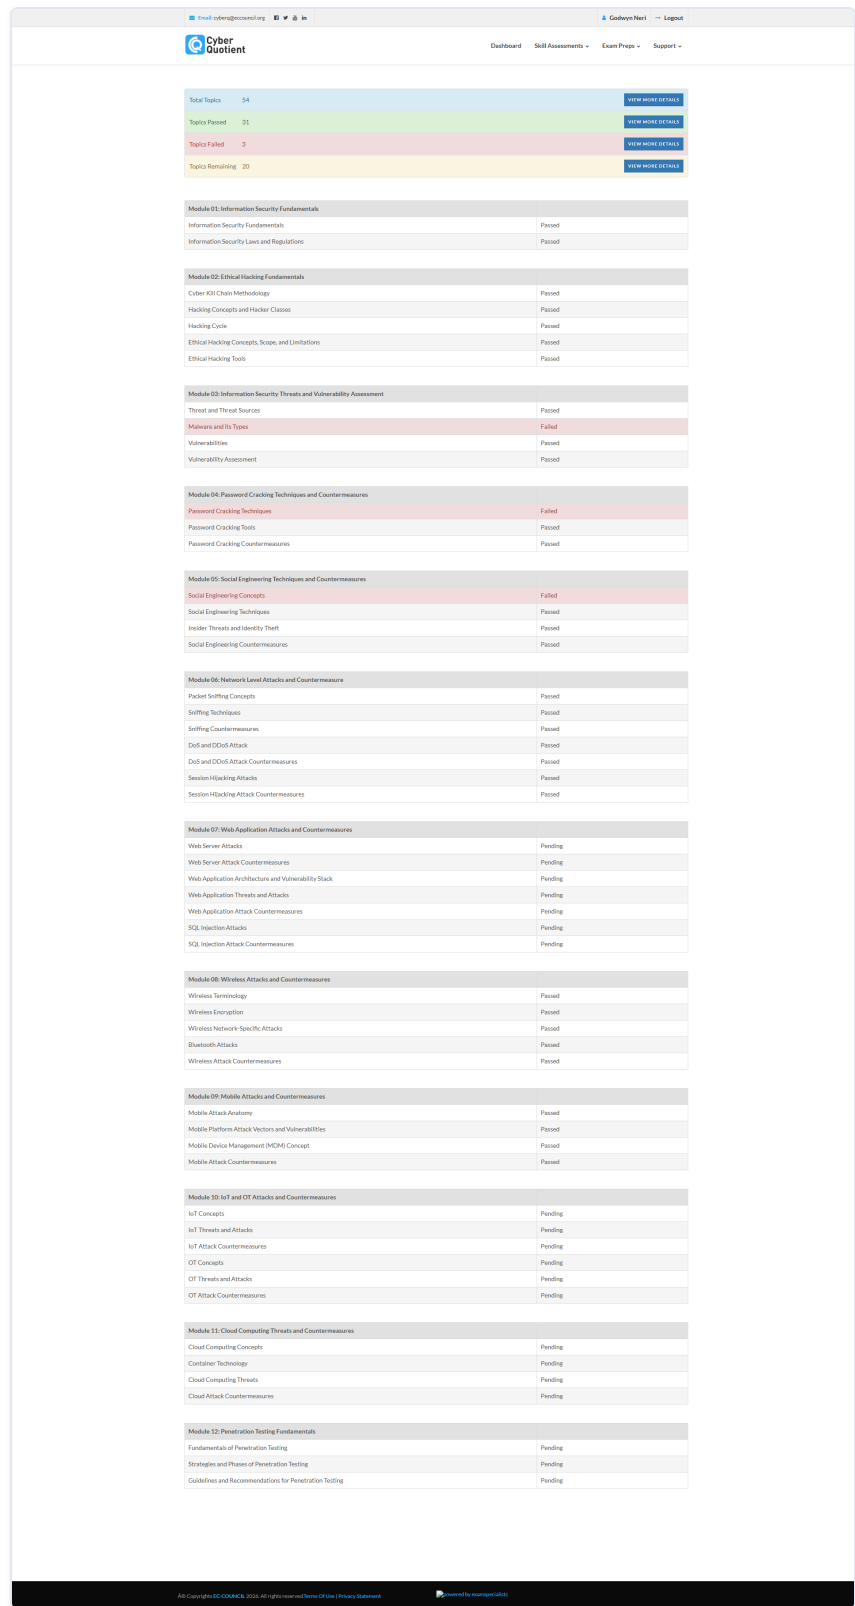

Figure 3.1: Official EC-Council Cyber Quotient Detailed Progress Report verifying Passed status across Modules 8 & 9.
