

IT Service Systems Economics

Roles, Responsibilities & Service Culture

Classroom reporting • Godwyn Neri

From roles to service culture

PEOPLE BEFORE PROCESS

Technology enables. People deliver.

ITSM succeeds when accountability is visible, decisions have owners, and teams understand the customer outcome—not only the ticket. Roles turn frameworks into repeatable behavior.

Clarity → trust → consistent service

Executive leadership for service value

Connects business strategy to service management practice. Balances customer value, risk, cost, capability, and continual improvement across the service lifecycle.

Translate strategy into measurable service outcomes

BUSINESS ACUMEN • FRAMEWORK STEWARDSHIP • DECISION RIGHTS

Start with three questions

Requirements are incomplete until value, experience, and evidence are explicit.

01

What does the customer value?

02

What experience do they expect?

03

How will success be measured?

Promise only what the system can sustain

Capability is the honest intersection of people, process, technology, suppliers, capacity, and funding.

01 What can IT reliably deliver?

02 What must change to close the gap?

Govern change. Restore service.

The Service Manager protects stability while enabling improvement—using risk-based change decisions and disciplined incident leadership.

One service. Shared stewardship.

The Service Sponsor secures authority and investment. The Service Team converts direction into design, execution, measurement, and improvement.

OUTSIDE THE ORG CHART

External roles shape service outcomes

Customers define value. Suppliers extend capability. Regulators set boundaries. Partners and consultants contribute expertise. Clear interfaces, contracts, escalation paths, and shared measures keep the ecosystem accountable.

Manage the relationship—not only the contract.

ITSM salary benchmarks

Illustrative monthly averages; role scope, location, certification, and industry materially affect offers.

Source: Jobstreet salary insights, 2023. Values rounded for classroom comparison.

Culture is how service happens when no one is watching.

Shared values and daily behaviors determine whether teams listen, own outcomes, collaborate, learn, and improve. Process documents cannot compensate for a mindset that avoids responsibility.

MINDSET → BEHAVIOR → EXPERIENCE

Reputation outside. Truth inside.

Culture is simultaneously a market signal and an operating system.

01

Brand perception

Every interaction becomes evidence of reliability, empathy, and competence.

02

Operational alignment

Honest reporting exposes constraints early—before hidden work becomes customer failure.

Belonging builds resilience

Strong cultures keep capable people—and help the organization adapt before change becomes crisis.

EMPLOYEE ADVOCACY

**People stay where
service work matters.**

ORGANIZATIONAL AGILITY

**Learning turns disruption
into adaptation.**

Great service is an economic and human system.

Clear ownership aligns investment, capability, behavior, and customer value. Service culture makes that alignment repeatable—even under pressure.

01 Where is ownership unclear in a service you use?

02 Which culture behavior would improve it fastest?
